# *GuardEn* Release Notes

**Release 8.6.10**

# CONTENTS

<b>RELEASE NOTES .....</b>	<b>1</b>
<b>INTRODUCTION .....</b>	<b>3</b>
<b>GUARDIEN GENERAL.....</b>	<b>3</b>
CR11724 TEXT FILTERS ON HOST ENCY .....	3
CR11726 GUARDIEN SERVER SELECT .....	3
CR11730 PERFORMANCE IMPROVEMENTS .....	3
<b>SYSTEM UPDATING.....</b>	<b>3</b>
CR11708 SUPPORT EJB WEB SERVICES AS TP MONITOR FOR RI GENERATION .....	3
CR11712 CUSTOM PROXY GENERATION MARKED AS FAILED, BUT ACTUALLY SUCCEEDS.....	3
CR11713 CUSTOM JAVA PROXY INSTALL FAILS .....	3
CR11722 CSE STAGING COPY STEP VARIANT ERROR .....	3
CR11757 ERROR COMPLETING SU WITH BLOCKENV .....	3
CR11761 CSE->MVS COMPILER INCORRECT RETURN CODE PARSING .....	3
CR11767 LINKING FOR IMS AND BYPASS SCREEN TYPE .....	4
<b>PROJECT ADMINISTRATION .....</b>	<b>4</b>
CR11728 TARGET PROPERTY VALUE REPLACE FUNCTION.....	4
<b>XOS.....</b>	<b>4</b>
CR11745 XO PROCESSING MVS PASSWORD.....	4
<b>GENIE DIRECT .....</b>	<b>4</b>
CR11763 PRESERVE OPSLIB/ZLIB WHEN CHANGING EAB TO AB AND AB TO EAB .....	4
<b>VERIFIER .....</b>	<b>4</b>
CR 11736 IET016 AND ATTRIBUTE STATE FLAGS .....	4
CR 11740 VIEW CHECKS FOR FUNCTIONS AND PROCESSES .....	4

## Introduction

---

Changes marked with a '\*\*\*' indicate fixes to high severity issues and it is highly recommended that the service pack is installed if you are likely to be affected by these issues.

Changes marked with a '\*\*' indicates fixes to medium severity issues or a change in behaviour and again it is recommended that the service pack is installed if this issue is likely to affect you.

## GuardIEn General

---

### ***CR11724 Text Filters on Host Ency***

---

When a text search filter is used on the HE sometimes the results are not correctly filtered, for example when filtering the CR list on description.

### ***CR11726 GuardIEn Server Select***

---

The GuardIEn Server Select Utility sets the 'Do not Cache' property off if the commcfg.ini file does not contain a CACHETIMEOUT token. The default is that the cache is not used if the token is not present so the checkbox should be ticked in this case.

### ***CR11730 Performance Improvements***

---

The performance of certain functions within Deliverable Usage has been improved.

## System Updating

---

### ***CR11708 Support EJB Web Services as TP Monitor for RI Generation***

---

Generation of RI Triggers for Java and TP Monitor "EJB Web Services" was previously not supported - it would produce an error in the GdRIGen.bat script due to the spaces in the TP Monitor value.

### ***CR11712 Custom Proxy generation marked as failed, but actually succeeds***

---

If a Custom Proxy has more than 8 characters in the name, Proxy Gen steps successfully generate the proxy, but the check to see if the generate work will fail as it truncates the ICM name being looked for to 8 characters.

### ***CR11713 Custom Java Proxy Install fails***

---

The installation step for Custom Java Proxies fails due to incorrect names being used in the generation of RMT file. This has been resolved.

### ***CR11722 CSE Staging Copy Step Variant Error***

---

If a CSE staging copy step is defined with the destination folder as the code gen libraries and a code generation variant > 1, the step incorrectly uses the 'source' folder code gen variant instead of the dest folder code gen variant.

### ***CR11757 Error completing SU with BLOCKENV***

---

After the recent change to not update the status beyond the BLOCKENV environment for a deliverable during migration, the SU complete step can now fail on attempting to update the status of the associated CR. This is now fixed as the BLOCKED deliverable is ignored when completing the SU.

### ***CR11761 CSE->MVS compile incorrect return code parsing***

---

If the action diagram source code contains text like RC=999, the CSE->MVS parsing of the compiler output to determine the return code can incorrectly interpret the source code literal as the compiler return code if the compiler options specify that the source listing is included in the compiler output.

## ***CR11767 Linking for IMS and BYPASS screen type***

---

When linking for IMS, the SCRTYPE variable is being incorrectly set to MFS when the techsys value is BYPASS.

## **Project Administration**

---

### ***CR11728 Target Property value Replace function***

---

When using the Find/Replace Text feature in Target Property definition, if the find or replace text is entered as mixed case but one of the properties is defined as upper case, the find and replace strings are converted to upper case and any remaining property find/replace functions use the upper case find/replace values. This is now fixed and the upper case conversion is only performed for upper case properties. Mixed case property replacement remains case sensitive.

## **XOS**

---

### ***CR11745 XO Processing MVS Password***

---

When an XO process batch job is submitted from the CSE onto MVS, the MVS password is converted to upper case. Since MVS passwords can now be mixed case, the password should not be automatically converted to upper case. If you have entered mixed case passwords that you wish to be in upper case, then the password will need to be re-defined in the target property values.

## **genIE Direct**

---

### ***CR11763 Preserve OPSLIB/ZLIB when changing EAB to AB and AB to EAB***

---

The genIE function to change an AB to an EAB (and vice versa) did not preserve OPSLIB or ZLIB packaging. Also affects genIE Plug-in equivalent function.

## **VeriflEr**

---

### ***CR 11736 IET016 and Attribute State Flags***

---

The IET016 check for perfect view matching also needs to check that the matched entity views have the same value for the 'generate attribute state flags' property.

### ***CR 11740 View Checks for Functions and Processes***

---

If a VeriflEr model scan check for view issues determines that a view belonging to a function or process is in error, the check report fails to resolve the view to the parent process or function.
