Release 2.5.11

Fixes

CR 172 Changing view data when Attribute State flags not enabled

If the 'Generate Attribute State Flags' option is unchecked for an entity view and you use the xTrace Monitor to change a view value, the data for the previous attribute is changed to place an 'l' in the last byte.

CR 173 ELSE clause in PAD statement text

When tracing a PAD, an ELSE clause can be appended to the IF clause. This is a display issue only but has been fixed.
