

Release 2.5.1
Release Notes

New Features & Enhancements

CR 144 Local IP Address

If there are multiple local IP addresses on the MVS system, rather than picking the default IP address for binding sockets, you can now specify the local IP address to use with the `XT-LOCAL-ADDRESS` variable in the XTRACEUE exit.

CR 146 Expand Group Views option

A new user option in the Monitor provides control over whether group views are fully expanded or expanded one level at a time.

Issues fixed

- CR 145 Various issues fixed with handling of group views
- Displayed values for inner group views when changing displayed row of outer group
 - Displayed rows for one group view when changing displayed row for a separate group view
