

Release 2.5.2
Release Notes

New Features & Enhancements

CR 148 New 'Slider' control to show current trace position and breakpoints

A new 'slider' control has been added, attached to the left side of the PAD List in the Monitor. This shows an overall picture of the PAD with current position marked in blue and any statement-specific breakpoints highlighted in red, for quick visibility and navigation around the PAD.

CR 149 New option to set top position

A new user option is available to control how many lines from the top the current statement is displayed.

CR 150 Tree View for View Windows

The view windows now provide a tree view with icons to expand and display the view structures.

Issues fixed

CR 149 Expanding Export Group Views

An issue with expanding export group views has been fixed.

CR 151 Windows Vista / 7 Border Padding

If the border padding property in Windows is set to a value greater than 0, some of the controls might have been partially positioned outside of the visible area of a window.
