

***Release 2.5.4***  
***Release Notes***

## **Fixes**

---

### ***CR 155 USE Statement View Mapping***

---

xTrace does not show all mapped views in a USE statement, usually only showing those up to the first Group View mapped, then no more after that, although at runtime the views are mapped and passed correctly.

### ***CR 157 Displaying Data from Nested Repeating Group Views***

---

When displaying the view data for a nested group view, when the subscript of the outer group is incremented, the subscript of the inner group is not correctly updated to represent the data for the outer group.
